Vermont 2022-2032 Long Term Occupational Projections

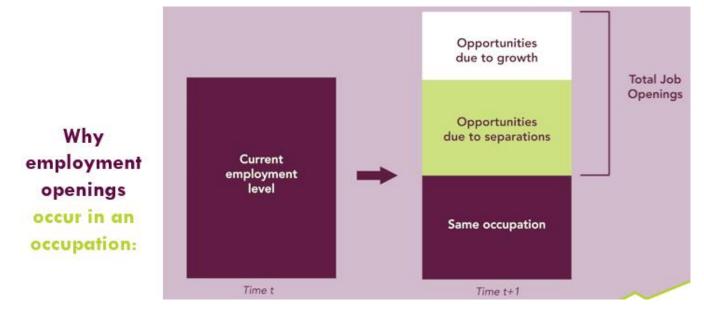

Long Term Projections model from the present to an equilibrium period of full employment in the future without regard to business cycles or other short-term shocks to the economy. They estimate where growth and shifts in employment will occur based on underlying fundamentals in the state economy, national and international trends, technological change, and other factors. In the case of the 2022-2032 projections, the economy has been recovering from the economic effects of the pandemic with more rapid growth early on in the projection period. That means that some of the reported growth has, in fact, already occurred.

Growth is only one source of job openings. Most openings come from exits from the occupation (retirements), or transfers, such as changing careers, being promoted into management, or completing a retraining program. A large number of workers shifted into retirement in the pandemic years and are not likely to return to the workforce. They are offset to some degree by in-migration to the state, fueled by remote work opportunities. In all, the state is projected to have an average of 40,633 openings per year in over 500 occupations.

The Leisure and Hospitality sector experienced the greatest swing in employment from the pandemic closings and eventual return to normal. Retail employment was already declining due to greater online purchases, a trend that was greatly exacerbated during the pandemic. Manufacturing was less affected by the pandemic, but the downward trend in many Manufacturing industries is projected to continue. Information and Professional and Business Services industries have grown strongly.

TOTAL JOB OPENINGS

Growth and separations

Occupational Projections measure jobs, versus workers, and one worker may hold more than one job. As measured by the Census Bureau, Vermont has a higher rate of multiple jobholders than the U.S. In 2022, the Vermont rate was 6.1% compared to the U.S. at 4.8% of the labor force.

Projections reflect anticipated changes in the mix of occupations as the economy grows and evolves, but one thing the projections do not account for is new and emerging occupations. Only jobs that already exist in sufficient numbers to be coded and counted can be projected. It is partly through collecting new job titles and duties from employers for the data used in projections that new occupations are identified for inclusion. The results provide a general guide for the direction and relative strength of occupational demand and are *not intended to indicate absolute levels of employment in an occupation*.

Projections are to be used for relative comparisons for occupations, and to help inform where training for the future workforce should be focused based on trends. Projections from the Separations methodology should not be compared with projections derived from the prior Replacements methodology. Any past projections become outdated when actual employment catches up with them, or new projections are released, and are no longer an accurate representation of the workforce.

Figure 1 Ranks the Major Occupational groups by number of annual openings. It shows openings due to both separations and growth. The Food Preparation and Serving Related occupations have the largest number of openings. Office and Administrative Support occupations are second largest, even though change is negative.

Figure 1

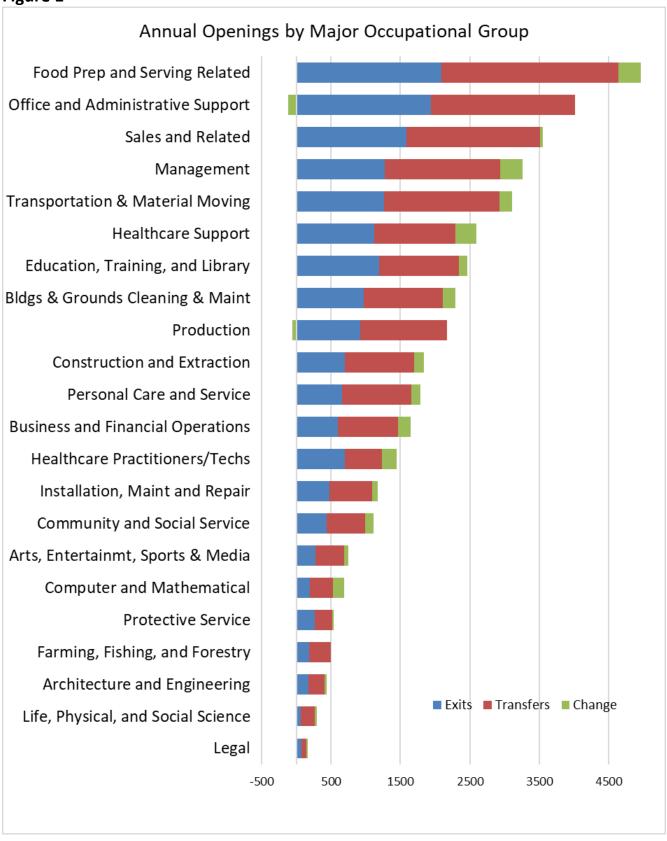

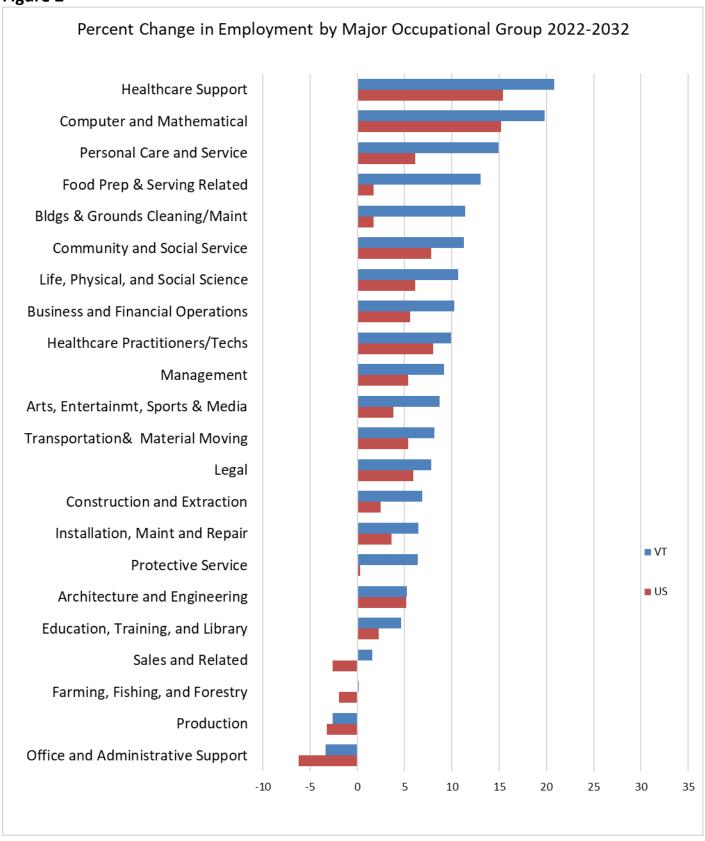

Figure 2 compares percent change in employment in Vermont to the U.S. by Major Occupational Group. Healthcare Support occupations have the largest percent change in Vermont, followed by Computer and Mathematical.

Figure 2

The top twenty-five occupations by number of openings appear in Figure 3. Different colors represent the educational requirements typically needed to enter the occupation, at a minimum. In a competitive labor market, additional education may be necessary to get hired. Also, individual employers may specify higher levels of education for their positions. For most jobs, the majority of openings come from separations (exits + transfers). For some occupations, *e.g.*, Cashiers, growth (orange portion) is negative.

Figure 3

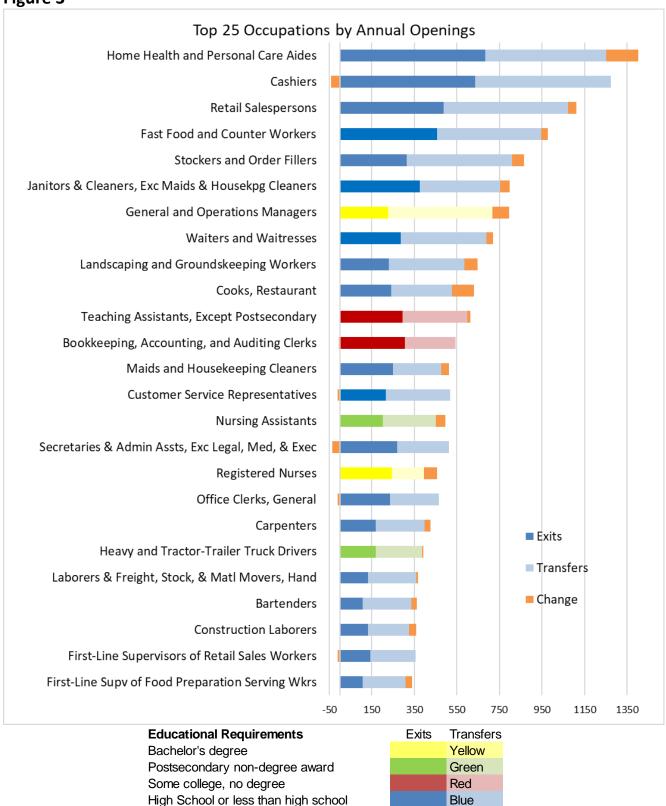

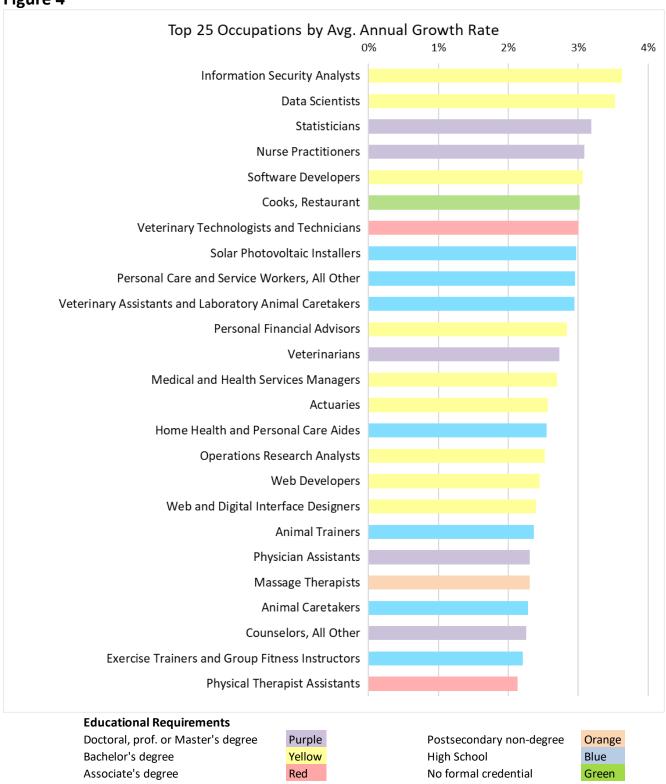

Figure 4 contains the top twenty-five occupations by rate of growth. Colors indicate the level of education typically required for entry. Many of the fastest growing occupations are in technical fields.

Figure 4

Results in the next section are grouped by the education level usually required for entry into the occupation. Higher levels of education largely correlate with increased wages. Roughly two thirds of all jobs may not require a postsecondary degree or award.

Occupational Projections and Wages, by Educational Level, Vermont, 2022-2032

Table 1

	% Share of	Change in	% Change in	Annual	Median Annual
	Employment	Employment	Employment	Openings	Occupational
Typical Education Level for Entry	<u>2022</u>	2022-2032	2022-2032	2022-2032	Wage, 2023
